Efficient data management for your product data

Is outdated item information and manual data entry challenging your business?

Our specially developed DATANORM article import makes it easier to import and manage article data into Dynamics 365 Business Central. Our tool saves time, reduces sources of error and ensures that your item data is always up to date.

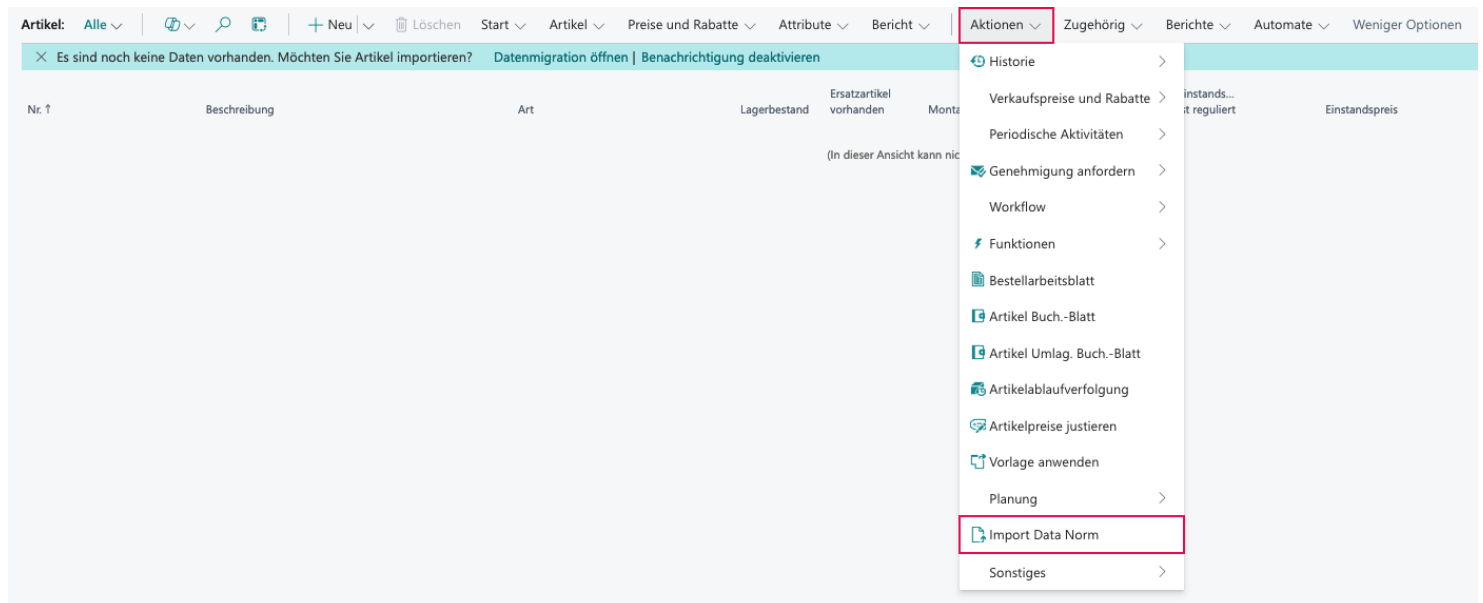

Functions of the DATANORM article import

Automated data transfer

Import DATANORM files with just a few clicks. No more time-consuming, manual data entry.

Flexible field mapping

Select the errors that are relevant to your item master data. You can make detailed settings to filter and sort the data according to your needs.

Customizable export and import templates

Use preset or custom templates to export or import information such as prices, customer numbers, billing addresses and much more.
